Problem Set 6

What to Do

1. Submit <u>Hello</u> in Python
2. Submit one of:
   - <u>this version of Mario</u> in Python, if feeling less comfortable
   - <u>this version of Mario</u> in Python, if feeling more comfortable
3. Submit one of:
   - <u>Cash</u> in Python, if feeling less comfortable
   - <u>Credit</u> in Python, if feeling more comfortable
4. Submit <u>Readability</u> in Python
5. Submit <u>DNA</u> in Python

If you submit both versions of Mario, we'll record the higher of your two scores. If you submit both Cash and Credit, we'll record the higher of your two scores.

When to Do It

By 11:59pm on 31 December 2020.

Advice

- Try out any of David's programs from class via <u>Week 6</u>'s source code.

Academic Honesty

- For Hello, Mario, Cash, Credit, and Readability, it is **reasonable** to look at your own implementations thereof in C and others' implementations thereof *in C*, including the staff's implementations thereof in C.
- It is **not reasonable** to look at others' implementations of the same *in Python*.
- Insofar as a goal of these problems is to teach you how to teach yourself a new language, keep in mind that these acts are not only **reasonable**, per the syllabus, but encouraged toward that end:
  - Incorporating a few lines of code that you find online or elsewhere into your own code, provided that those lines are not themselves solutions to assigned problems and that you cite the lines' origins.
  - Turning to the web or elsewhere for instruction beyond the course's own, for references, and for solutions to technical difficulties, but not for outright solutions to problem set's problems or your own final project.
